NATIONAL ACADEMY OF SCIENCES—NATIONAL ACADEMY OF ENGINEERING—INSTITUTE OF MEDICINE—NATIONAL RESEARCH COUNCIL

2101 Constitution Ave., Washington, D.C. 20418.

The National Academy of Sciences is a private non-profit-making organization dedicated to the advancement of science and its use for general welfare. Its Congressional charter of 1863 calls upon it to serve as an independent adviser to the Federal Government in science and technology and provides it with broad authority to determine its organization. Membership (currently about 1,200) is by election only and is in recognition of research accomplishments.

In December 1964, a National Academy of Engineering was created under the charter of the Academy of Sciences as a parallel organization, autonomous in the selection of its membership but co-ordinated with the Academy of Sciences in the provision of advice to the Federal Government.

The Institute of Medicine was chartered by the National Academy of Sciences in 1970 in recognition of the problems posed in the provision of adequate health services. The Institute identifies important issues that relate to health and medicine, initiates and conducts studies of national policy and planning for health care, responds to requests from the federal government for studies and advice, and establishes liaison with societies in the field.

The National Research Council was established by the Academy of Sciences in 1916 to permit a broader association of scientists and engineers in the work of the Academy. The Research Council is now the principal operating agency of both Academies, carrying out studies by means of appointed committees of scientists and engineers. Policies for the work of the Research Council are established by a Governing Board, consisting of representatives of the elected councils of the two Academies and of the Institute of Medicine.

NATIONAL ACADEMY OF EDUCATION

VENTURA HALL, STANFORD,
CALIF. 94305

Founded 1965.

The National Academy of Education is organized by distinguished scholars "to create a forum which will set the highest standards for educational inquiry and discussion." It parallels in general purposes, programmes and prestige the National Academy of Sciences. It operates with private and foundation funds. A majority of the members and foreign associates are outstanding university scholars from the behavioural sciences, the humanities and education, who have made notable contributions to educational scholarship. The members-at-large are distinguished practitioners. The principal function is to stimulate fruitful lines of research. Activities have included task force studies leading to advisory reports and publications, programmes of support to identify and encourage promising scholars of education at the early post-doctoral stage, and efforts to raise the level of public discourse concerning key educational issues. The Academy meets twice a year.
